Subject Index Vol. 3

Abrasiveness of fluoride prophylaxis pastes, 225
Albino ferret dentition, 369
––, usefulness for caries research, 212
Aluminium factories, environmental effect on caries, 221
Amalgam fillings, and *in vitro* caries, 213
Ammonium effect on streptococcal fermentation of sucrose, 226
Amylase distribution in salivary glands, 210
Apatite, incorporation of hydroxyl and fluoride, 219
Arylaminopeptidases in normal and carious dentine, 134

Bacteria, polysaccharide-producing, and fluoride in water, 178
Bone meal, cariostatic effect in the hamster, 215

Calcifying fluids, influence on *in vitro* enamel lesions, 214
Calcium in human plasma and saliva, 211
Carbohydrate breakdown in plaque, 249
Caries in albino rats, and sucrose and starch, 208
– in animals, and trace elements, 1
– in an animal experiment, 200
– in children, and streptococcal polysaccharide, 190
– in children, and water fluoride, 178
–, possible demineralization by complex forming agents, 213
–, and deciduous enamel structure, 218
– in enamel, effect of fluoride rinsings, 226
–, enhanced by selenium, 14
–, environmental effect of aluminium factories, 221
– etiology, New Guinea study, 44
–, experimental in man, 206
–, geographic variation in USA, 32
– in the hamster, effect of dextrans, 205
– increment after withdrawal of fluoride dentifrice, 226
– induction in monkeys, 227
– inhibiting effect of hexafluorostannate, 315
– inhibition in rats by fluoride preparations, 225
– inhibition in dentine by hexafluorostannate, 224
– prevalence in Uganda, 222
– prophylaxis by fluoride, experimental and clinical tests, 281
–, rampant, induction in monkeys, 207
– in the rat, trimetaphosphate effect, 326
–, relation to water fluoride, 223
– resistant recruits, mineral environment, 23
–, response of deciduous dentine, 348
–, response of dentine, 217
– around silver amalgam fillings, 213
– in young diabetics, 215
Cariogenic streptococcus, sucrose fermentation influenced by K, Na, NH_4, 266
Cariostatic effect of bone meal in the hamster, 215
Clinical trial of hexafluorostannate, 315

Complex forming agents, possible role in carious demineralization, 213
Crystallography, sampling technique of dental hard tissues, 216
Cystine cleaving enzymes in normal and carious dentine, 134

Deciduous dentine, response to caries, 348
Demineralization, in caries, possible role of complex forming agents, 213
Density of human parotid fluid, 149
Dental conditions, relationship to molybdenum, 75
– hard tissues, sampling technique for electron microscopy and crystallography, 216
– tissues, content of trace elements, 60
Dentine, deciduous, response to caries, 348
–, caries inhibition by hexafluorostannate, 224
–, carious, phosphorolytic capacity, 210
–, normal and carious, enzyme content, 134
–, response to caries, 217
Dentition of the albino ferret, 369
– of diabetics, 215
Dextrans, effect on hamster caries, 205
Diabetics, caries, 215
–, dentition, 215
Dissolution of enamel and fluorapatite, 220

Electron microscopy, sampling technique on dental hard tissues, 216
––, scanning, of pretreated enamel, 225
Enamel biopsy for determining *in vivo* fluoride uptake, 119
– caries, effect of fluoride rinsings, 226
–, deciduous, relationship to dental disease, 218
–, demineralization studies by scanning electron microscopy, 225
– dissolution studies, 220
– fluoride concentration and caries susceptibility, 223
– lesions *in vitro*, histopathology, 214
–, microdistribution, uptake and loss of fluoride, 109
– protein, embryonic, gel filtration, 217
–, variations in composition, 221
Enzymes, in normal and carious dentine, 134

Fermentation of sucrose, streptococcal, effect of K, Na, NH_4, 266
Ferret, albino, usefulness for caries research, 212
– dentition, 369
Fluorapatite, dissolution studies, 220
–, tracer exchange studies, 220
^{18}F, penetration to the pulp from solutions and fillings, 214
Fluoridated water, caries and polysaccharide-producing bacteria, 178
Fluoridation of salt, two year clinical results, 222
Fluoride analysis of soft dental deposits, 224
– concentration in enamel and caries susceptibility, 223
– dentifrice, effect on caries of withdrawal, 226
– dentifrices, F retention in preschool children, 290
– dosage with salt, urinary estimation, 218
– in drinking water, relation to caries and fluorosis, 223
– electrode for urinary estimation of F intake, 218
–, excretion in human saliva and milk, 159
–, incorporation in apatite lattice, 219
– ingestion and excretion of monofluorophosphate, 219
– intake, estimation in urine by F electrode, 218
–, *in vivo* uptake determined by enamel biopsy, 119
–, microdistribution, uptake and loss in enamel, 109
– mouth rinses containing manganese, 99
– mouth rinses, F retention in preschool children, 290
– preparations inhibiting rat caries, 225
– pretreatment of enamel, 225
– prophylaxis of caries, experimental and clinical tests, 281
– prophylaxis pastes, abrasiveness and F uptake, 225
– retained from mouth rinses and dentifrices, 290
– rinsings, influence on enamel caries, 226
– uptake from prophylaxis pastes, 225
Fluorine, position as impurity in hydroxylapatite, 222
Fluorosis, dental, prevalence in Uganda, 222
–, relation to water fluoride, 223

Follicles of unerupted teeth, 216
Gel filtration of embryonic enamel protein, 217
Geographic variation of caries in USA, 32
Glucose, catabolism by a caries-conducive streptococcus, 167
–, in human plasma and saliva, 211
Glycoprotein, sublingual, properties, 211
–, virus haemagglutination-inhibiting, distribution in salivary glands, 210
Hamster caries, effect of dextrans, 205
–, cariostatic effect of dietary bone meal, 215
Hexafluorostannate, clinical caries-inhibition, 315
–, inhibiting dentinal caries, 224
Hydroxylapatite, adsorption of sublingual glycoprotein, 211
–, position of fluorine as impurity, 222
Hypoxia, experimental influence on the rat incisor, 308
Induction of caries in monkeys, 227
Iodophilic polysaccharide-producing bacteria, caries and fluoridated water, 178
Ionic influence on streptococcal fermentation, 208
Lysozyme, distribution in salivary glands, 210
Macaca irus, induction of caries, 227
––, induction of rampant caries, 207
Manganese in fluoride mouth rinses, 99
Matrix polysaccharies in dental plaque, 206
Microbial changes by trimetaphosphate in the rat, 326
Microscopy, light and electron, of caries in deciduous dentine, 348
Milk, human, fluoride content, 159
Mineral environment of caries resistant recruits, 23
Mineralisation defects, following neonatal asphyxia, 301
Mitis-salivarius agar for differentiating plaque streptococci, 207
Molybdenum and dental conditions, 75
Monkey caries induction, 227
– plaque, polysaccharide formation, 205
Monkeys, induction of rampant caries, 207
Monofluorophosphate, ingestion and excretion in children, 219
Mouth rinses with fluoride solution containing manganese, 99
Neonatal asphyxia and mineralisation defects, 301
Nutrition and caries etiology in New Guinea, 44
––– in a blackhooded rat strain, 200
ORCA Congress 1969, abstracts, 205
Osmolality of human parotid fluid, 149
^{32}P, penetration to the pulp from solutions and fillings, 214
Parotid fluid, density and osmolality, 149
Penetration to the pulp of ^{18}F and ^{32}P from solutions and fillings, 214
Perinatal hypoxia, influence on the rat incisor, 308
Phosphate in human plasma and saliva, 211
Phosphatases in normal and carious dentine, 134
– in plaque, effect of trace elements, 209
Phosphorolysis of plaque, effect of trace elements, 209
Phosphorolytic capacity of plaque, saliva and carious dentine, 210
Phytin, effect on rat plasma, saliva, bone and teeth, 212
Plaque, content of trace element, 60
–, fluoride analysis, 224
–, matrix polysaccharides, 206
–, in monkey, polysaccharide formation, 205
–, phosphorolytic capacity, 210
––, distribution and characteristics, 238
– streptococci, differentiated on mitis-salivarius agar, 207
Plasma, contents of glucose, calcium and phosphate, 211
Polysaccharide, bacterial, and fluoridated water, 178
–, streptococcal, and caries in children, 190
Polysaccharides, formation in monkey plaque, 205
– of plaque matrix, 206
Potassium effect on streptococcal fermentation of sucrose, 266
Primary teeth, mineralisation defects following neonatal asphyxia, 301
Prophylaxis of caries by fluoride, experimental and clinical tests, 281
– pastes, abrasiveness and fluoride uptake, 225

Proteases, from oral streptococci, purification, 209
Protein breakdown in plaque, 249
– matrix of plaque, breakdown, 249

Rat caries, inhibited by fluoride preparations, 225
Rats, black-hooded, in a caries experiment, 200
Response of deciduous dentine to caries, 348
Retention of fluoride from mouth rinses and dentifrices, 290

Saliva, contents of glucose, calcium and phosphate, 211
–, human, fluoride content, 159
–, phosphorolytic capacity, 210
Salivary glands, distribution of alpha-amylase, lysozyme and virus haemagglutination-inhibiting glycoprotein, 210
Salt fluoridation, two year clinical results, 222
––, urinary estimation of dosage, 218
Scanning electron microscopy of pretreated enamel, 225
Selenium, a caries enhancing element, 14
Silicate cement, penetration to the pulp of ^{18}F and ^{32}P labels, 214
Sodium effect on streptococcal fermentation of sucrose, 266
Stannous fluoride, water-free, for topical application, 339
Starch and caries in albino rats, 208
Streptococcal fermentation of sucrose, ionic influences, 208
Streptococci, distribution and characteristics in plaque, 238
–, of human plaque, differentiation, 207
–, polysaccharide-producing, and caries in children, 190
Streptococcus, caries-conducive, catabolism of glucose, 167
–, cariogenic, sucrose fermentation influenced by K, Na, NH_4, 266
– zymogenes proteases, purification, 209
Sublingual glycoprotein, properties, 211
Sucrose and caries in albino rats, 208
– fermentation, streptococcal, influence of K, Na, NH_4, 208
– fermentation, streptococcal, effect of K, Na, NH_4, 266

Toothbrushing with fluoride dentifrice, effect on caries of withdrawal, 226
Topical application using water-free stannous fluoride, 339
Trace elements and animal caries, 1
–– and caries in New Guinea, 44
–– of dental tissues and plaque, 60
––, effect on plaque phosphatases, 209
––, round table discussion, 88
Tracer studies on fluorapatite, 220
Trimetaphosphate influence on rat caries and microbiota, 326

Uganda, prevalence of dental caries and fluorosis, 222
Unerupted teeth and their follicles, 216
Urinary estimation of fluoride dosage with salt, 218
– F excretion, estimation of intake by F electrode, 218

Water fluoride, relation to caries and fluorosis, 223
Water-free stannous fluoride for topical application, 339

Caries Research

Journal of the European Organization for Caries Research (ORCA)
